

# ***THE DIY GUIDE TO BUILDING AN M-STATE WATER DEVICE***

Ormus, also known as ORMEs (Orbitally Rearranged Monoatomic Elements), white powder gold, M-state elements and monoatomic gold is the same substance that the ancients referred to as manna, shewbread, ch'i, Prana, the Philosopher's Stone, shemanna and the Fountain of Youth.

By their modern definition, chemical elements are monatomic. In nature many elements appear (at normal temperatures and pressures) as compounds. Elements appearing in pure crystals, such as gold and many other transition metals, could be said to be monatomic. In that sense "monoatomic gold" is a pleonasm. The term "orbitally rearranged" has no meaning in atomic physics, but gives a scientific flavor to the definition.

"Monatomic" is a more usual spelling for the term meaning "in single atoms" than "monoatomic," but Ormus-related literature consistently uses "monoatomic", which may therefore be a term of art having nothing to do with singleness of atoms. M-state elements have been observed to exhibit superconductivity, superfluidity, Josephson tunneling and magnetic levitation. These are an entirely new class of materials.

Superfluidity implies that Ormus is a fluid without internal friction (zero viscosity). Josephson tunneling occurs through an insulating barrier. The question is still undecided whether Ormus is insulating or superconductive. It has medicinal properties, as well as a sweet aftertaste, and a thicker viscosity than water. Consider that our bodies are mostly water.

-Taken from <http://rationalwiki.org/wiki/ORMUS>

So how do we turn water into M-state water? Here is how:

## LIST OF MATERIALS

### 5 Hard Drive magnets (from ebay, or computer repair shops)

10 matched hard drive magnets neodymium SUPERPOWER lift more than 34 pound each

Item condition: **For parts or not working**

Time left: 26d 23h (Feb 26, 2012 14:30:35 PST)

Quantity:  2 available

Price: **US \$10.00**

**Buy It Now**

Best Offer:

**Make Offer**

Add to Wish list

**BillMeLater** \$10 back & 6 mos to pay on your 1st purchase  
Subject to credit approval. [See terms](#)

Shipping: **\$9.00** Standard Int'l Shipping | [See all details](#)

[See details about international shipping here.](#)

Delivery: **Varies for items shipped from an international location**  
Seller ships within 3 days after [receiving cleared payment](#).

### 2 pliers, 1 flathead screwdriver (from Hardware Stores, Plumbing or Tool section)

### One roll of Clear Packaging Tape and Dispenser

# 1 tornado tube

(you can buy these all over the place online, amazon, EdmundScientific, google shopping, etc or in toy stores)

2 screw cap bottles. 12 oz or 2 Liter

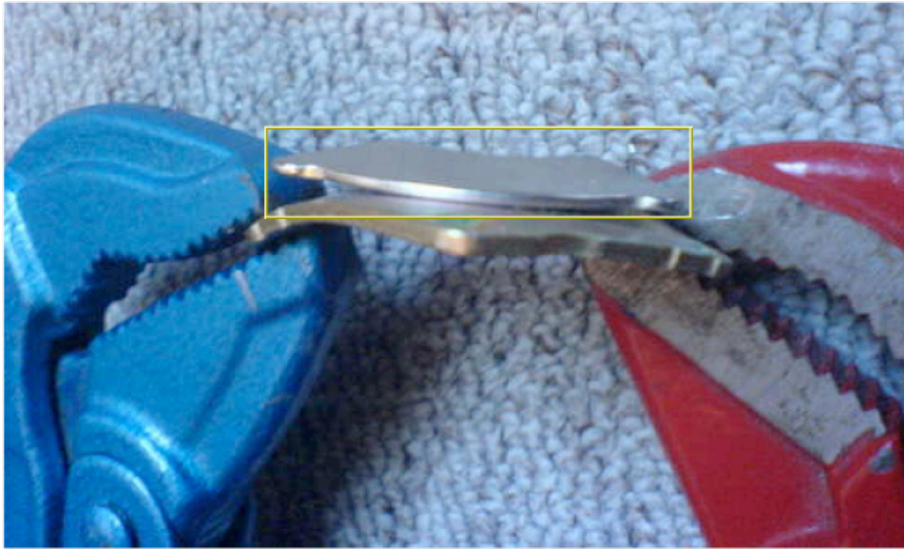

or

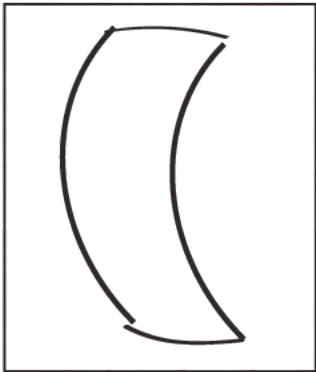

Empty an wash both bottles of identical size. Peel off the labels of both bottles, and remove the little plastic ring under the cap threads.

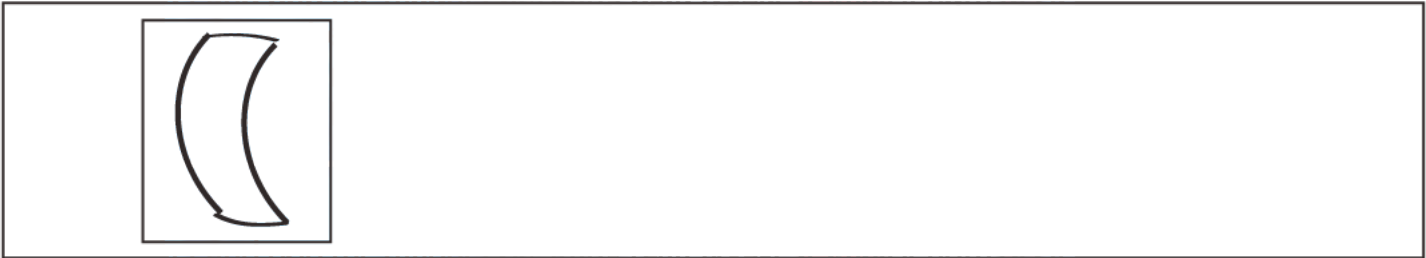

Take your pliers and bend the edges of the hard drive magnets until there is enough of a space under the magnet that you can fit a flathead screwdriver under.

slide the screwdriver and pop the magnet off. Immediately take a small length of clear packing tape, and tear off a section. Lay the magnet on the tape, and fold the tape , so it lays over the top of the magnet and press it flat, making sure there are no air bubbles. You now have a magnet encased in a thin layer of plastic. DO NOT LET THESE MAGNETS GET TOO CLOSE TO EACHOTHER. THEY WILL FLY TOGETHER AND BREAK. Do the same to the other magnets.

Take one of the magnets and lay it on a longer piece of clear tape.

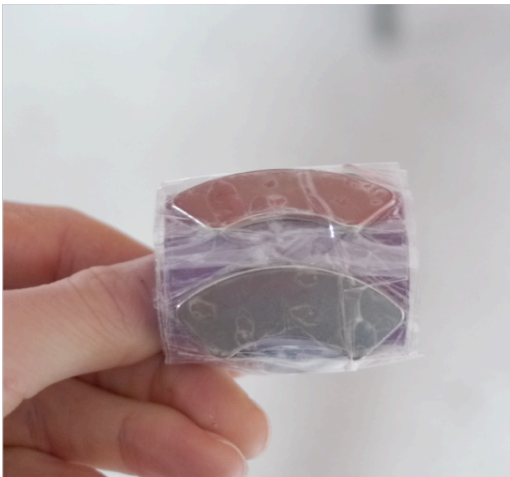

and lay the magnet on the Tornado Tube like this

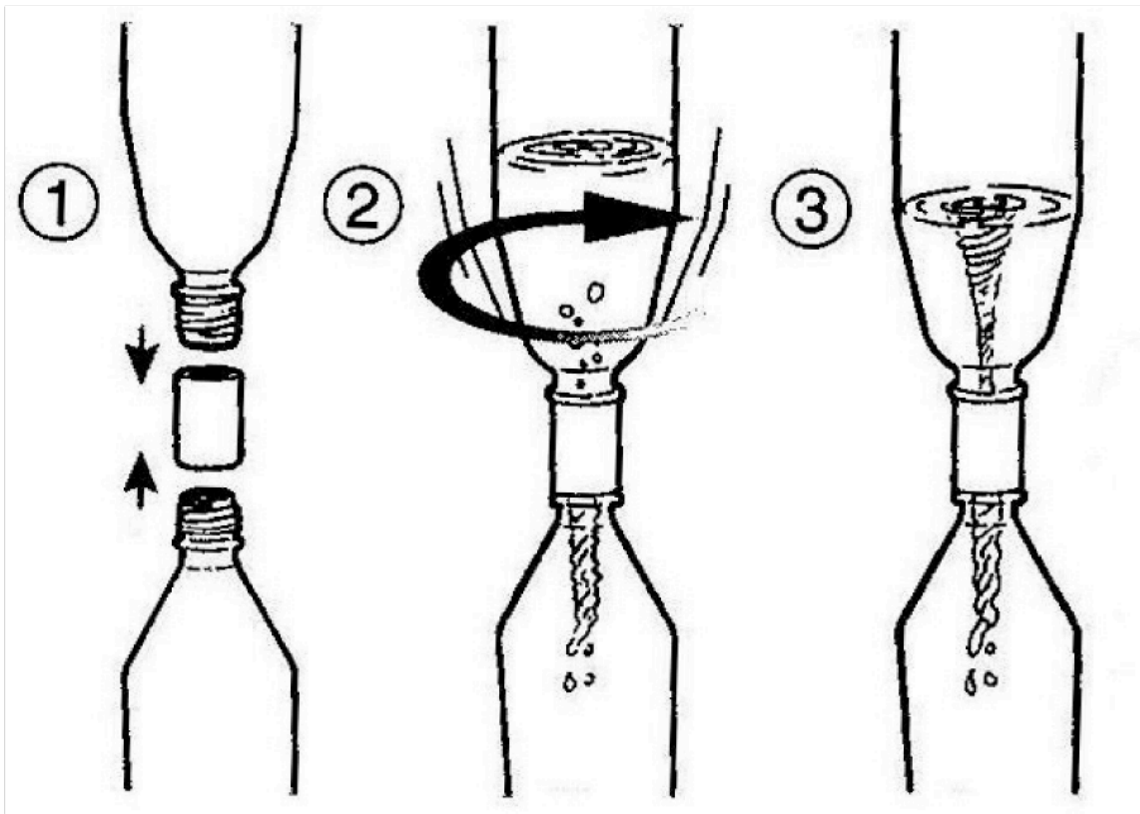

Bind the remaining tape around the tube TIGHTLY, to hold the magnet in place.

the same with the other magnets. Make sure they are all facing the same way. Tape them as close together as possible. You will mostly be able to fit 5 together on one tube. To safely get the magnets close together, turn the taped magnet away, and come in at an angle with the new taped magnet, and slide it into place. If you keep all the glued sides facing Inwards, it will be easier to face them all the same way.

Fill one of the jugs with filtered pure water. and connect the tube to the ends of the bottle. Turn the bottle upside down and swirl it. After a few revolutions a water vortex will form, and the water will swirl through the magnetic field, thus aligning the spin of the electrons.

and there you have your completed unit.

Keep flipping and spinning several times in a row. You will notice the water will start vortexing easier and easier. and you will have ormus M-State water. Some people choose to keep it contained in a container covered in aluminum foil for 3 days to enhance its qualities. There were no significant differences after storing for 3 days. Some people drink it for its health effects, and others water plants with it, to grow larger plants. Please make some yourself and experiment with this strange superfluid. The pictures on the following page were assembled from other Ormus water sites, and haven't yet been proven to be made by this device. The water made by this device, has a sweet aftertaste, a thicker viscosity, and gives a clear flushed fresh feeling in the body, the morning after drinking it. Experiment with other ways of keeping the magnets securely in place, instead of using tape. Possibly epoxy resin. The water drops sometimes get through the threads and fog the tape. A simple workaround, is just around the corner. Good Luck and Enjoy.

storing method

freshly made

**COMPLETED ASSEMBLY**  
5 INCH OD WITH 3 INCH ID TUBES  
SPACE BETWEEN FILLED WITH  
7 POUNDS OF MAGNETITE  
AND ONE PINT OF WATER INSIDE

24 hrs later
